# BALANCED PORTFOLIO FACTSHEET

## ABOUT THE PORTFOLIO

The Balanced Portfolio is a market related portfolio that aims (but does not guarantee) to provide a return that exceeds inflation by 5.5% per annum net of fees over measurement periods of at least seven years. The portfolio is thus most suitable for members that have a long investment horizon and whose objective it is to earn a return well ahead of inflation over the long term.

The Balanced Portfolio is diversified in nature and has a high exposure to growth assets (i.e. South African and global equity) and thus investment returns are likely to be volatile. Large positive or negative returns are possible, particularly over short periods. This investment approach requires members to have the courage and patience for long term investing and not to be unsettled by short term underperformance compared to the peer group.

The Balanced Portfolio's local assets are managed by South African managers with local balanced mandates whilst a specialist approach is followed in respect of domestic infrastructure and the offshore assets whereby each offshore manager is a specialist in its specific asset class.

All pre-retirement members' monies are invested in the Balanced Portfolio up to five years before retirement age when the de-risking phase commences.

## PERFORMANCE TO REPORT DATE

Note: The median performance is the Global Balanced Peer group median return of the WTW Full Discretion peer group excluding managers with less than R1 billion in assets. The peer group returns are adjusted to allow for assumed manager fees of approximately 0.7% p.a. in the long term.

Performance figures are net of fees and have been annualised for periods longer than one year.

## CUMULATIVE PERFORMANCE TO REPORT DATE

The chart illustrates the cumulative value of R1,000 invested in the Balanced Portfolio on 1 March 2010 (the inception date), compared to the extent to which R1,000 would have grown had it been invested by the median manager and finally had it grown with the target performance of headline inflation (CPI) + 5.5% p.a.

*Standard deviation* is a measure of how widely the annual return is dispersed – the lower this measure, the less absolute risk.

*Downside risk* is a variation of standard deviation in that it measures the deviation of only bad volatility, i.e. in this case where the returns are below zero. In other words, it measures how large the deviation in losses is.

The *Sortino ratio* measures the return generated per unit of risk of losing capital, as measured by the downside risk. The higher this ratio, the better the risk adjusted return.

*Maximum drawdown* shows the maximum that the portfolio was down from a peak before it recovers back to the peak.

# PENSIONER PORTFOLIO FACTSHEET

## ABOUT THE PORTFOLIO

The Pensioner Portfolio is a diversified portfolio created for those members of the TFG Retirement Fund that chose to purchase a guaranteed pension at retirement from the TFG Retirement Fund. The pension policy aims to provide increases equal to 100% of inflation over a 3-year period, and these are dependent on fund performance.

In order to meet this pension increase objective, the primary investment objective of the Pensioner Portfolio is to achieve a real return in line with the post-retirement interest (PRI) rate set by the Actuary and agreed to by the Trustees for determining the Pensioner liabilities. As at 30 September 2024, the PRI is 5.5% p.a.

The Pensioner Portfolio is defensive in nature and has a high exposure (70%) to South African government bonds and other fixed interest assets that are managed in such a way that the Portfolio's assets and liabilities move in line with each other, leading to a more stable funding level. The remainder of the Portfolio's assets are invested in growth assets (i.e. predominantly global equity) and thus investment returns on this part are likely to be volatile, but are expected to earn a higher return than the defensive part of the portfolio.

## PERFORMANCE TO REPORT DATE

Performance figures are net of fees and have been annualised for periods longer than one year.

## CUMULATIVE PERFORMANCE TO REPORT DATE

The chart illustrates the cumulative value of R1,000 invested in the Banker Portfolio on 1 March 2010 (the inception date), compared to the extent to which R1,000 would have grown had it been invested in the benchmark (STeFI Composite) and finally had it grown with the target performance of headline inflation (CPI) + 1.0% p.a.

## MARKET INDICES RETURNS

The table shows the performance of relevant market indices (all in rand) over various measurement periods to the report date.

## ROLLING 1-YEAR RETURNS

The chart illustrates the 1-year rolling performance of the Banker Portfolio relative to the inflation target.

## RISK STATISTICS

Risk statistic	Money Market Portfolio	STeFI Comp
Std dev (%)	0.5%	0.6%
Downside risk	0.0%	0.0%
Sortino ratio	n/a	n/a
Max drawdown (%)	0.0%	0.0%
Max drawdown # of months	n/a	n/a
Max drawdown recovery # of months	n/a	n/a

The risk statistics reflected above are calculated over the period since 1 March 2010 (175 months).

*Standard deviation* is a measure of how widely the annual return is dispersed – the lower this measure, the less absolute risk. *Downside risk* is a variation of standard deviation in that it measures the deviation of only bad volatility, i.e. in this case where the returns are below zero. In other words, it measures how large the deviation in losses is. The *Sortino ratio* measures the return generated per unit of risk of losing capital, as measured by the downside risk. The higher this ratio, the better the risk adjusted return. *Maximum drawdown* shows the maximum that the portfolio was down from a peak before it recovers back to the peak.

## TOTAL INVESTMENT CHARGES (TIC) 12 MONTHS TO 31 DECEMBER 2023

	Annual % of assets (incl VAT)
Management Fee	0.25%
Performance Fee	0.00%
Other Fees*	0.01%
Total Expense Ratio (TER)	0.26%
Transaction Costs (TC)	0.00%
Total Investment Charge (TIC)	0.26%

\*Other fees include: platform, audit and custody fees, fund expenses and VAT

The TIC represents the estimated total fees as a percentage of the portfolio charged over the 12-month period. The TIC includes annual investment management fees (the largest component), performance fees where applicable, estimated transaction costs and all other relevant costs. The TIC is reported annually.
